FAQ

What is PhotonX?
PhotonX is an advanced, multi-technology IPL (Intense Pulsed Light) platform that is designed to treat a variety of skin concerns with safe, comfortable and reliable results.

Does PhotonX hurt?
PhotonX is designed to be a comfortable treatment with minimal discomfort. Depending on the treatment, you may feel some warmth, tingling or a mild snapping sensation, but the technology is specifically designed to minimise heat and discomfort. Everyone's sensitivity is different, so the sensation can vary from person to person.

Is PhotonX safe?
PhotonX has been designed with multiple safety features to help make treatments safer and more comfortable. It includes automatic filter recognition, triple cooling, sapphire contact cooling and real-time temperature monitoring. As with any energy-based treatment, safety also depends on appropriate settings, correct treatment technique and suitability for the individual client.

How many PhotonX sessions do I need?
The number of sessions varies depending on the treatment concern, your skin type and how it responds to the treatment. As a general guide: a minimum of 6 sessions are required for hair reduction, 2-4 sessions for redness and pigmentation. Between 3-6 sessions are required for scars, fine lines, wrinkles, skin tightening and acne management. Your PhotonX expert will recommend a treatment plan tailored to your skin at the time of consultation.

What is the difference between IPL and laser?
Both IPL and laser use light energy to treat skin concerns, but they work differently. Laser uses a single, precise wavelength, making it highly targeted for specific treatments. IPL uses a broader spectrum of light, giving it the versatility to address multiple concerns, including hair reduction, pigmentation, vascular, acne concerns and skin rejuvenation.

The **PhotonX** uses advanced technologies and interchangeable filters to refine the light delivered, combining versatility with greater treatment precision.

Feel the difference with PhotonX

Advanced light-based technology designed for effective treatments with comfort, safety and skin suitability in mind.

Treatments include:

- Hair reduction
- Pigmentation
- Vascular concerns
- Acne management
- Fine lines and wrinkles
- Scars & stretch marks
- Skin tightening

PHOTONX

Safety x Comfort x Results
Advanced Light-Based Treatments

- Redness
- Pigmentation
- Hair reduction
- Lines & wrinkles
- Acne management
- Scarring & stretch marks

PHOTONX

Advanced light-based solutions
for healthier, clearer, confident skin.

- **TGA LISTED DEVICE**
- **CLINICALLY BACKED TECHNOLOGY**
- **RESULTS YOU CAN TRUST**

Pigmentation

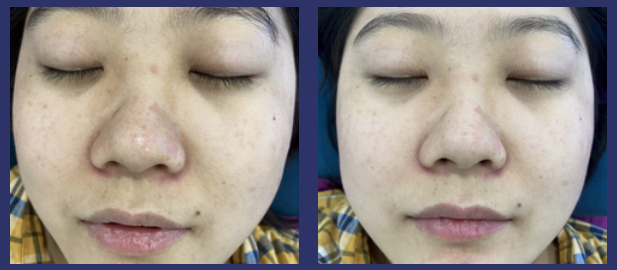

Targets sun spots, age spots and uneven tone for a clearer, brighter complexion.

Before *After*

Skin rejuvenation

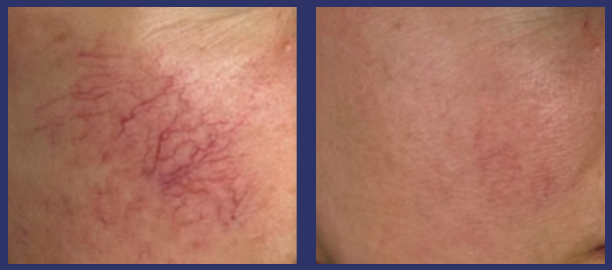

Stimulates collagen, improves tone and texture to restore smoother, younger-looking appearance.

Before *After*

Vascular

Reduces visible redness, broken capillaries, facial flushing and rosacea.

Before *After*

Acne management

Helps clear active acne, reduce breakouts and calm inflammed skin, while stimulating collagen production.

Before *After*

Hair reduction

Deliver comfortable permanent hair reduction on most skin types for smoother, silky skin.

Before *After*

In-Motion Technology SHR/BBR

In-Motion technology delivers a gentle, controlled treatment using continuous movement and rapid, low-energy pulses.

By gradually building thermal energy within the target, it provides a more comfortable treatment experience while effectively addressing unwanted hair, pigmentation and signs of skin ageing. Suitable for Fitzpatrick skin types I–V, In-Motion combines comfort, safety and effective clinical results.
